

TERRACAM X2

The Webcam for all Situations

The TerraCam X2 provides outstanding technology in a very solidly built housing. The timeless design is an ideal complement to every computer workstation. Technically speaking, the TerraCam X2 sets new standards. The 1.3 megapixel camera allows resolutions of up to 1280x1024 (video and snapshot).

Connect and get going

Unlike other webcams, the TerraCam X2 does not need any other drivers. Just connect it to an available USB 2.0 port, and you are ready to get in touch with your friends and buddies using your messenger software or take part in a videoconference. With its high transmission rate, the integrated microphone guarantees high voice quality and clarity. The holder, which can be locked in place, keeps the camera stable and ensures shake-free images.

With the provided WebCam Companion software from ArcSoft, it is easy to create and edit snapshots and video clips. You can even use the TerraCam X2 as a security camera. As soon as it detects any movement, WebCam Companion automatically starts recording and notifies you via SMS or e-mail.

These and even more functions, such as capturing still images and editing videos, make the TerraCam X2 and WebCam Companion a fantastic team for audiovisual communication on your computer.

share your life!

TERRACAM X2
