**TerraCAM iLook**

For Desktop + Mobile Computing

TerraCAM iLook

Whether you're at home or on the road, there's always a connection available for the TerraCAM iLook. Forget about installation nightmares and take advantage of mobile video with a simple connection to the USB port of your PC or notebook. Just plug it in and go!

You can use all possibilities of the TerraCAM iLook thanks to the complete software package. Participate on video conferences, sent video or photo emails to your friends and family and observe your PC and surroundings.

SupervisionCam Room surveillance and webcam software

This included surveillance application permits effective monitoring of your PC or your surroundings. Once activated, the camera is automatically enabled and registers any movements that take place in its field of vision together with the date and time. When your TerraCAM registers movement, either a signal will be sent, or an application of your choice will be started and/or the recorded images will immediately be sent via e-mail. It's ideal for monitoring rooms and protecting your computer.

Photo Express 2.0: Say cheese

With Photo Express you can lend your pictures that special finishing touch. Merge different pictures, make them look like oil paintings or pencil sketches, and add balloons, clouds or snow. Also greeting cards or a personal photo calendar will pose no problem at all. Send your pictures by email, or let Photo Express create a photo page on the Internet for your Web site.

VideoLive Mail: The living post card

Why not surprise your friends and relatives with an original video e-mail? VideoMail enables you to produce short video clips that have small file sizes despite their high quality, and that can be conveniently sent by e-mail at the click of a button. Since VideoLive Mail can also create self-playing videos, the person who receives the email does not even need any special video software to play them back.
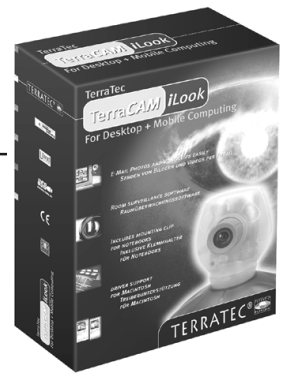

Net Meeting: An eye for an eye

Net Meeting – the mother of all videoconferencing systems is also included with the TerraCam iLook. In conjunction with a modem or an ISDN adapter, this application enables you to take part in videoconferences on a worldwide basis or inexpensively realize a video telephone solution. Needless to say, it works just as well in your own local network.
